

# CINF 201 Final Project

## Topics

- [Overview](#)
- [General Requirements](#)
- [Content Requirements](#)
- [Individual Page Checklist](#)
- [Where to Begin](#)
- [Project Submissions](#)

## Overview

For the final project in this course, you will be building a 5-page website on a topic of your choice. This project will be broken up into 4 parts with separate submissions. The first part is the Project Proposal in which you tell me about the website topic you're choosing for your project. The second part is the midterm; this is when roughly 50-75% of your website should be done. The third part is the Final Project Review where you give a presentation to the class explaining your progress on the project before it is submitted. The final part is the Final Project Submission in which you submit the fully finished website.

## General Requirements

1. There should be at least 5 pages of content on your website
2. Your files should be organized (folders for file types: css, js, images, etc)
  - a. Submission must include links to your main pages and a zip folder containing all files you used for the project
3. All CSS must be externally placed in **one** CSS file
4. Validated HTML in every page (green bar when I check – some yellow may be okay)
5. You must use at least one **relevant** instance of JavaScript

## Content Requirements

The content present on your website must be **original**. This means you cannot borrow text content or images from other websites without expressed permission. You may borrow snippets of code in terms of HTML/CSS/JS but there should be attribution provided (either a link to the source or a comment in the HTML/CSS/JS).

You are also not allowed to use any website generators. All code should be created from scratch unless it meets the criteria mentioned above (just a snippet of code and appropriate attribution). Your code shouldn't be from previous semesters as well.

Lastly, make sure your content is correct and that you have enough content on each page. Empty or bland pages will result in you losing points toward your final project grade.

## Individual Page Checklist

Use the list below to ensure your pages meet best standards.

- Does the page validate?
- Is the page's purpose clear once it loads?
- Is the main navigation easy to find?
- Do all the links on the page work? Are they easy to distinguish? Is the text meaningful?
- Do all images have alt tags?
- Is the title tag being used?
- Is there appropriate metadata included in the head?
- Is the font easy to read in terms of font size and color?
- Do I use headings and lists to break up content?
- Is there enough white space around my text?
- Do your forms have labels? (If you use forms)
- Does the website look good in multiple browsers? (IE9+, FireFox, Chrome)
- Is everything spelled correctly?
- Do I have a relevant usage of JS on my page(s)?

## Where to Begin

Start by planning how you want to structure your content. The wireframes created for the project proposal should help you or you can create new ones. From there, you should begin coding up the various items on your page with HTML. After your content is all set, you can then use CSS to style things and position your elements as you need. Also, evaluate what features you want your website to have and whether they need JavaScript. If they do, feel free to look at code from other websites or class examples to build those features.

## Final Project Submissions Dates/Rubrics

### **Project Proposal – 8pts – Due Thursday, September 30<sup>th</sup> at midnight**

For the proposal, you will be telling me about your project and providing visuals so I can get an idea of what you want to build. The parts for the project proposal are broken down below.

**Needs Assessment:** Your submission should include a description of the website you wish to build. This should be about two paragraphs describing in detail what you plan on doing with your website. Refer to the week 2 lecture notes for a refresher on what Needs Assessments are and what to include. Use the list below as a short reference:

- Description - a brief overview of the website.
- Audience - who is the audience that will be visiting the website?
- Objectives - a list of the website's objectives: What will the website or app do? What will the audience need to learn?
- Actions - Any features you may want to include in this website.

- What are some tougher/long term goals?
- What features will be easier to implement?

**Wireframes:** Create a wireframe for 3 separate pages of your website. These don't have to be final layouts but ones you are possibly considering. Make sure to include enough content in your wireframes so I understand your intention with each page. You can use the examples as listed below:

- Home/landing page
- An interior page
- A contact page

**Style Tile:** Visit the following link about style tiles: <http://styletil.es/>

You will create a style tile to help define a preliminary look and feel for the website. While we haven't gone over how to create a style tile in class you will be responsible for learning how to create one. This will require an image editor such as Gimp, Paint.NET, Photoshop, etc. Each style tile should include the following items as appropriate:

- Logos
- Possible colors
- Possible patterns, if any
- Possible typography choices: a paragraph and headings example
- Examples of a button
- Examples of a link
- Visual language

For this part, you can use the examples provided on <http://styletil.es/> or you can go to Blackboard → Final Project → Project Proposal. On Blackboard, you'll find a template style tile file that you can use. Simply download it, open it up with an image editor, and edit it with your colors, fonts, patterns, etc. and then upload it with everything else for credit.

### Recommendations

- Watch for grammar and spelling
- Be consistent
- Make use of the Hemingway Editor: <http://www.hemingwayapp.com/>
- Come to office hours if you get stuck

### Submission

The Narrative, 3 wireframes, and 1 style tile are all **due Thursday, September 30<sup>th</sup> at midnight**. To submit your work, go to Blackboard → Final Project → Project Proposal and submit a zip folder containing all your work. To create a zip folder, you will select all your items, right-click them and choose "send to" to send them to a compressed zip folder. If you have trouble with this, please come see me or refer to Google.

## **Project Proposal Rubric – 8pts**

### Needs Assessment – 3pts

- Thoroughness of explanation: 1.5pt
- Quality of writeup: 1.5pt

### Wireframes – 3pt

- Each Wireframe: 1pt
  - Sufficient relevant wireframe content: .5pt
  - Content is understandable: .5pt

### Style Tile – 2pts

- Colors included: .5pt
- Fonts/adjectives included: .5pt
- Overall website feel conveyed successfully: 1pt

## **Midterm – 12pts – Due Thursday, October 28<sup>th</sup> at midnight**

For this part, you will be creating 3 separate pages of your website. These don't have to be fully done pages but preliminary layouts with most of the structure built. The layouts must exhibit clean and valid HTML/CSS. In the midterm, you don't need to use real content yet.

You should use English for headlines and major links, but you can use Lorem Ipsum (<https://www.lipsum.com/>) for any general text or Placeholder (<https://placeholder.com/>) for any placeholder images. Placeholder content is acceptable, but you should make significant progress on these pages in terms of the layouts.

The three pages can be from any part of your website but each one should be different from the other ones. Some examples of pages you could build are the front page, an interior page, an about page, or a contact page. Only one CSS file should be used for all three pages.

## **Recommendations**

- Be consistent and use the same stylesheet for all three pages
- Validate your code with the W3C Validator: [https://validator.w3.org/#validate\\_by\\_input](https://validator.w3.org/#validate_by_input)
- Demonstrate good typography recommendations learned in class
- Use English for headlines and major links but latin for the body text
- Link your pages together so I can navigate through them more easily

## **Submission**

To receive credit for this part of the project, you must submit three links in total (one for each page) in addition to a zip folder containing all the files used for your work. The zip folder should contain at least three HTML files and one CSS file. The links should be live meaning that I can click them and see your page (not with file:\\). The submission area is located on Blackboard → Final Project → Midterm. The Midterm is **due Thursday, October 28<sup>th</sup> at midnight**.

## **Midterm Rubric – 12pts**

### Submission – 2.5pts

- Links provided: 1.25pts
- Zip folder uploaded: 1.25pts

File/Folder Organization – 2.5pts

- Files are organized (separate css, js, images, etc): 1.25pts
- All CSS is externally placed in **one file**: 1.25pts

Content – 7pts

- There is enough content on each page and it looks good overall 2pts
- Content is organized and easy to follow (i.e. I can identify what page I'm on and how to navigate to other pages): 2pts
- HTML content validates: 3pts (1 for each page)

### **Final Project Review – 4pts – Presentations on December 2<sup>nd</sup> Starting at 6pm**

Each student is responsible for doing a presentation about their website in front of the class. This presentation can be a video, powerpoint, word document, etc. The goal is for you to demonstrate your progress and talk about your website. If you're unsure of how to create a presentation, you can come talk with me via email or visit me in office hours. I've listed some potential talking points below:

- What is your website about?
- Why did you choose your design/color scheme?
- What JavaScript feature do you plan on implementing?
- Were there any parts that you're particularly proud of?

### **Recommendations**

- Keep it brief, this presentation shouldn't be more than 2-3 minutes long
- Be specific about what you have done
- Talk about any problems you experienced or next steps
- Use the points above for guidance
- Don't talk down about your work (be proud of it!)

### **Submission**

There is no submission for this part of the project. Instead, I will grade them after you are done presenting and then upload the results to Blackboard. I'll be using the rubric below to evaluation your Final Project Review.

### **Rubric – 4pts**

- Presentation is brief – 1pt
- Presentation covers different parts of website – 2pts
- Presentation is engaging – 1pt

### **Final Project Submission – 16pts – Due Tuesday, December 14<sup>th</sup> at midnight**

For the Final Project Submission, you will be following the same guidelines as the midterm except your website will be finished and submitted as a whole. In total, you should be submitting

5 links (one for each page) and a zip folder containing all the files used for this project. At this point, the project should be polished and complete...this means there should be no more lorem ipsum or placeholder content. Each page should validate, and the CSS should be externally placed inside of one file.

### **Recommendations**

- Review the Content/General Requirements listed above
- Ensure that your page meets the Individual Page Checklist items
- Validate each page
- Use the accessibility tools mentioned in class to assess your website
- Make sure all pages link to each other

### **Submission**

To submit this project, you must submit a working link to your final project on Blackboard. Ideally, you will provide a link to each page in case some of the links don't work for whatever reason. The submission area is located on Blackboard → Final Project → Final Project Submission. The links and zip folder are **due Tuesday, December 14<sup>th</sup> at midnight**. Any explanations or other content you wish to include can be left as a comment with your submission or in a separate .txt file.

### **Rubric – 16pts**

Submission – 2pts

- Links provided: 1pt
- Zip folder uploaded: 1pt

File/Folder Organization – 2pts

- Files are organized (separate css, js, images, etc): 1pt
- All CSS is externally placed in one file: 1pt

Content – 12pts

- Content is organized and easy to follow (i.e. I can identify what page I'm on and how to navigate to other pages): 2.5pts (.5pt for each page)
- HTML content validates: 2.5pts (.5pt for each page)
- Content meets accessibility standards as mentioned in class notes: 2pts
- Aesthetics (does the website look nice in general and in multiple browsers?): 3pts
- JavaScript is used at least once on the website for a relevant feature: 2pts
